# Content & Structured Data

## Content Quality Profile

|                    |                           |
|--------------------|---------------------------|
| Word Count         | 210                       |
| Reading Level      | Difficult (College level) |
| Reading Ease Score | 30.0 <span>FAIR</span>    |
| Content/Code Ratio | 4.4%                      |
| Heading Structure  |                           |
| H1: 0              | H2: 3                     |
| H3: 0              |                           |

## Structured Data & Social

|                 |         |
|-----------------|---------|
| JSON-LD Present | NO      |
| Open Graph Tags | MISSING |
| Twitter Cards   | MISSING |

## Content Recommendations

- Increase content length (currently 210 words, aim for 500+)
- Consider adding H3 subheadings for better content hierarchy
- Improve content-to-code ratio (currently 4.4%)

## Image Optimization

|                                                                    |                       |
|--------------------------------------------------------------------|-----------------------|
| Total Images Analyzed                                              | 12                    |
| Missing Alt Attributes                                             | 0 <span>GOOD</span>   |
| Optimization Score                                                 | 65% <span>FAIR</span> |
| → Add width/height attributes to 11 images to prevent layout shift |                       |
| → Implement lazy loading for below-the-fold images                 |                       |
| → Convert 3 images to modern formats (WebP, AVIF)                  |                       |
